OSF Lak Peer Review of Open Science and Reproducibility Explanations

This document serves to provide greater elaborations as to the choices made on each entry reviewed in the conference proceedings for Learning Analytics and Knowledge. Each elaboration can be viewed by finding the associated digital object identifier (DOI) link.

https://doi.org/10.1145/3506860.3506978

The paper does not provide any links to external resources. Additionally, the paper does not seem to explain the raw data at all, only the compiled results.

https://doi.org/10.1145/3506860.3506977

Paper seems to be working off of a compiled dataset from Discourse Processing in Dissertation-Argumentative Texts: An Approach Based on Argument Mining and Supervised Machine Learning. The original datasets and analysis code seem to be found in two locations: one for annotations and the other for the mining experiment. The paper itself seems to be openly available to all along with the dataset. However, since the dataset is licensed under All Rights Reserved (default when no license is present), it can technically not be used by anyone in a public capacity. Since licensing is poorly understood, we will mark the dataset as yes for `Open Data`. The paper does provide some documentation on the dataset through Table 6 and Table 7. However, it only seems to include a partial list of what was collected. `Data Documentation` will be marked as partial for this reason. While the datasets do have an empty license and README file, they are directed towards the current paper. As such, they will both be marked as not having any. No materials can be found for the paper itself.

https://doi.org/10.1145/3506860.3506974

Paper is open access and licensed under CC-BY-4.0. Some description of the dataset has been provided in Table 1, and as such it will be marked as partial for `Data Documentation`. The raw dataset and materials do not seem to be provided anywhere.

https://doi.org/10.1145/3506860.3506972

The raw dataset and materials do not seem to be provided anywhere. Some dataset documentation seems to be provided in a separately attached supplemental document in Appendix 1, 2, and 3, marking it as a partial for `Data Documentation`.

https://doi.org/10.1145/3506860.3506939

The raw dataset and materials do not seem to be provided anywhere. There seems to be some dataset documentation on determining the coding schemes to use. In addition, there were some explanations on the provided use cases; however, the associated link does not provide access. Will be marked as partial for `Data Documentation`.

https://doi.org/10.1145/3506860.3506935

The raw dataset and materials do not seem to be provided anywhere. Some description of the dataset has been provided in Table 1, and as such it will be marked as partial for `Data Documentation`.

https://doi.org/10.1145/3506860.3506922

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. Some description of the dataset has been provided in Table 1, and as such it will be marked as partial for `Data Documentation`. One of the provided materials used is Amberscript, which is not open. As such, `Open Materials` will remain as no.

https://doi.org/10.1145/3506860.3506918

Paper is open access and licensed under CC-BY-NC-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. Although the paper is presenting an algorithm as its main argument, it does use data and performs some level of analysis, meaning that it will not be treated as non-applicable for `Open Data` or `Open Materials`.

https://doi.org/10.1145/3506860.3506917

Paper is open access. Open materials include eDoer, licensed under CC-BY-NC-4.0, the pafy Python library, the wikipedia Python library, and the associated evaluation survey used. Some analysis seems to have been conducted on the dataset without providing the associated material, so it will be marked as partial. Material documentation is similar as the python libraries have them while I wasn't able to easily locate any for eDoer. Will be marked as partial as well. Datasets used include one from ESCO, although unspecified which is used, and one which must be requested from the authors. `Open Data` will be marked as on request since the main dataset used is collected by the authors themselves. `Data Documentation` will be marked as partial to cover the information provided by ESCO, but not the authors on their on request dataset.

https://doi.org/10.1145/3506860.3506916

Paper is open access and licensed under CC-BY-NC-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506915

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. There is a section on the description of the dataset, so `Data Documentation` will be marked as partial.

https://doi.org/10.1145/3506860.3506914

Paper is open access. Open materials used include twitteR R library, nltk (documentation) Python library, spaCy Python library, Nominatim Python library (used via docker), and gensim Python library. There is also a live version of Figure 4 through the NB Viewer. However, no dataset nor data documentation were provided. In addition, the analysis used to view the work is similarly not present. As such, `Open Data` and `Data Documentation` will be marked as no while `Open Materials` and `Materials Documentation` will be marked as partial.

https://doi.org/10.1145/3506860.3506913

Open materials used seem to be Moodle and associated plugins (Jitsi and Configurable Reports). No materials provided for analysis, so it will be marked as partial for `Open Materials` and `Materials Documentation`. No dataset has been provided, but some documentation has been mentioned in Tables 1-3. `Data Documentation` will be marked as partial.

https://doi.org/10.1145/3506860.3506912

Open materials used is AcaWriter (linked by paper here), though there does not seem to be any documentation on it. Additionally, some separate analysis was conducted, which was not provided as a material, and as such `Open Materials` is marked as partial while `Materials Documentation` is no. The paper also apparently draws data from Augmenting pedagogic writing practice with contextualizable learning analytics, but it was not found within a reasonable timeframe. As such, both `Open Data` and `Data Documentation` will be marked as no.

https://doi.org/10.1145/3506860.3506911

Open materials used include RiPPLE, which does have some documentation in the form of video explanations. However, we could not verify anything else as the sign up site spent longer

than five minutes on any connection used. Will mark as partial for both `Open Materials` and `Materials Documentation`. No dataset or documentation has been provided.

https://doi.org/10.1145/3506860.3506910

No materials were mentioned. In addition, while a dataset was provided on a Google site, it was made up of papers, most of which were not open access, and as such does not meet the `Open Data` requirement. Additionally, no documentation about the dataset modeled was provided.

https://doi.org/10.1145/3506860.3506908

Open materials used includes rENA R package. However, not all materials were provided (analysis performed by the authors). `Open Materials` and `Materials Documentation` will be marked as partial. Some data documentation is represented through Tables 1-2 in addition to parts of section 4.

https://doi.org/10.1145/3506860.3506907

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506906

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506905

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506904

Open materials include Polite Dialogue Generation and scikit-learn Python library. Some data was mentioned, but only in the form of examples located in an appendix document. As such, the data fields will remain no while the materials fields will be set to partial.

https://doi.org/10.1145/3506860.3506903

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506902

Paper is open access and licensed under CC-BY-4.0. Open material used by the paper can be found on GitHub. It does not seem like any other material was used, and as such, `Open Materials` will be marked as full. The material has some comment documentation, and will be marked as partial. The material has a README but no license, meaning it is not usable by other authors. The dataset itself is not provided for confidentiality reasons, and will be marked as no. If it were available, the material is not reproducible as no setup process is provided to have the necessary Python libraries or versions to run the analysis.

https://doi.org/10.1145/3506860.3506901

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506900

An OSF page has been provided containing the papers used in the analysis. However, most were not open access, and as such will be marked as no for `Open Data`. There is some description on the data documentation, so it will be kept as partial. Information was collected through handmade notes, meaning that the materials fields are not applicable here. This includes the `README` and `License` fields. Reproducible will be kept as no instead of non-applicable as the thought processes used for classification and review could have been documented and as such reproduced.

https://doi.org/10.1145/3506860.3506899

This paper is arguing a certain modeling approach, so it does not have any need for data, materials, preregistration, or reproducibility. All fields will be marked as non-applicable for this reason.

https://doi.org/10.1145/3506860.3506898

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. There does seem to be some documentation on the categories present in the Collaboration Constructs section, so `Data Documentation` will be marked as partial.

https://doi.org/10.1145/3506860.3506897

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. They do seem to validate the algorithm accuracy using the SPAADIA dataset, but it seems that this was not used for the analysis and will not be considered toward either of the data fields.

https://doi.org/10.1145/3506860.3506896

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506895

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. Open materials includes eda-explorer Python scripts. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506894

Paper is open access and licensed under CC-BY-4.0. The materials do not seem to be provided anywhere. They mention that the dataset is from Beyond Team Makeup: Diversity in Teams Predicts Valued Outcomes in Computer-Mediated Collaborations; however, neither the dataset nor documentation is provided openly.

https://doi.org/10.1145/3506860.3506893

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include Hypothes.is and motifr R library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506892

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506891

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506890

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506889

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506888

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include OpenPose. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506887

Paper is licensed under CC-BY-NC-SA-4.0. The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include bupaR R library, processmapR R library, cluster R library, and heuristicsmineR R library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506886

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506885

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include ZoomSense and its webclient. The webclient is written by the authors and includes a permissible license and README, so they will both be marked as yes. However, the collected feedback does not seem to be provided or the analysis used to organize the information. The materials fields will be marked as partial for this reason.

https://doi.org/10.1145/3506860.3506883

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506882

Paper is open access and licensed under CC-BY-4.0. The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include Moodle and tslearn Python library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506881

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506880

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Tables 1-2, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506878

Paper is open access. While a dataset was provided on a Google sheet, it was made up of papers, most of which were not open access, and as such does not meet the `Open Data` requirement. However, some documentation is open, so `Data Documentation` will be marked as partial. Information was collected through handmade notes, meaning that the materials fields are not applicable here. This includes the `README` and `License` fields. Reproducible will be kept as no instead of non-applicable as the thought processes used for classification and review could have been documented and as such reproduced.

https://doi.org/10.1145/3506860.3506877

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 3, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506876

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506875

The materials do not seem to be provided anywhere. The raw dataset seems to be collected using a student database (which is no longer present), Indeed using a Python library (though which is not specified and doesn't mention an limiting criteria), NAICS for sectors, and class syllabi for specified courses (the actual syllabi are not linked). As most of the dataset doesn't exist or is not able to be determined as open, `Open Data` will be marked as no. Some data documentation is represented through Tables 1-2, 4, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506874

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506873

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 2, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506872

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. A supplemental statistics dataset can be found on an OSF project; however, this will not contribute to either of the data fields.

https://doi.org/10.1145/3506860.3506871

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, 3, and Appendix A, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506870

The dataset and open materials used can be found on Github. However, only part of the dataset is uploaded; the rest can be obtained by contacting the author, so it will be marked as on request. The data documentation is not available. The materials will be marked as full in addition to the README. There is no materials documentation nor license meaning that the source itself is All Rights Reserved. The source itself is also non-reproducible since the Python libraries and their associated versions are not mentioned, including the version of Python used.

https://doi.org/10.1145/3506860.3506869

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. The paper does mention the use of Algebra Nation, but not a link to the specified page itself, so it cannot be determined whether this is an open material.

https://doi.org/10.1145/3506860.3506868

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506867

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506866

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. Open materials include the psych R library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3506860.3506865

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 2, and as such it will be marked as partial. Open materials include FFmpeg, scikit-learn Python library, Gensim Python library, BERT Python project, TensorFlow Python library, OpenFace, imbalance-learn Python library, and Praat. In addition, the source of the project is provided on GitHub. Since the source is provided, `Open Materials` will be marked as full. No documentation is available on the source itself. A README and permissible license is provided. Source is not fully reproducible as only a partial list of libraries is provided (openSMILE for example) in addition to a nondescript version of Python 3. Another reason

results from the model internally using some form of randomness which is not frozen or set with a seed, making it impossible to reproduce the original model in the paper.

https://doi.org/10.1145/3506860.3506864

Paper is open access and licensed under CC-BY-NC-ND-4.0. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 2, and as such it will be marked as partial.

https://doi.org/10.1145/3506860.3506863

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3506860.3506862

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. If the dataset were provided, it would not meet the open data requirements as it seems to use research papers, of which most are not open to begin with.

https://doi.org/10.1145/3506860.3506861

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448212

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` includes OnTask. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448211

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Tables 1-2, and as such it will be marked as partial. `Open Materials` include Moodle, Hypothes.is, pMineR R library. I could not determine whether Alexandria is an open source tool. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448210

The paper seems to be argumentative in nature to create a new theoretical idea to use in the field. As such, all of the fields will be marked as non-applicable.

https://doi.org/10.1145/3448139.3448209

Paper is open access and licensed under CC-BY-4.0. The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. `Open Materials` include Radon Python library and statsmodels Python library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448208

Paper is open access and licensed under CC-BY-NC-SA-4.0. Two datasets are available: skillcommons and youtube. There is no documentation on the dataset. `Open Materials` includes pafy and the source code for the paper. While it could be marked as full, the generated graphs were not provided in the implementation, so it will be marked as partial. There is some documentation in the source, but no README or license. Additionally, the code is not reproducible as the Python library versions are not present and the randomness is not deterministic (set with a seed).

https://doi.org/10.1145/3448139.3448207

Paper is public access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448206

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448205

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Section 4.1, and as such it will be marked as partial. `Open Materials` includes code2vec. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448204

Paper is open access. The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` include course2vec and SBERT. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448203

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. Additional methodology is provided in a separate document.

https://doi.org/10.1145/3448139.3448202

Paper is public access. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448201

This paper demonstrates a new toolkit, and as such the data fields are non-applicable. The materials themselves are available through the website and broken into multiple tools. Out of the thirteen available tools, three do not make their source accessible. The rest seem to be based on open source materials; only one was made by the authors of the paper. The documentation on the parameters are also not provided, though it seems that there is some explanation through the original source the webhook is based on. For these reasons, the materials fields will be marked as partial. Additionally, although the tools are open source, only the paper makes a claim that the website is open source and under a permissible license while neither are mentioned anywhere. Reproducible will be marked as non-applicable as there is nothing to reproduce.

https://doi.org/10.1145/3448139.3448200

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448199

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448198

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448197

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` includes survival R package. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448196

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448195

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` include kml R library and lme4 R library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448194

This paper creates and develops a new makerspace. The makerspace itself could be public, and as such the materials fields will be marked as no. Otherwise, everything else will be marked as non-applicable.

https://doi.org/10.1145/3448139.3448193

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448192

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448190

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. `Open Materials` includes nimbusml Python library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448189

`Open Materials` include RiPPLE and the source code provided by the author. The source does not seem to provide generation of all figures in the paper; so it will be marked as partial. The data is also partially available from public use in the KDD cup while the RiPPLE datasets are not. For this reason, we will mark open data as no and documentation as partial. The source does have a README but no license. As for if it would be reproducible, they would not be as there are no provided versions for the given libraries.

https://doi.org/10.1145/3448139.3448188

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448187

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. The evaluation form is provided as a supplemental material and does contribute to the material fields partially.

https://doi.org/10.1145/3448139.3448186

Paper is open access and licensed under CC-BY-4.0. This paper is a discussion on a new method of understanding, and as such will be marked non-applicable for all fields.

https://doi.org/10.1145/3448139.3448185

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448184

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448183

Paper is public access. The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. The game itself is available, so it will be counted partially towards the materials field but not the documentation one.

https://doi.org/10.1145/3448139.3448182

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` includes the source code provided by the author. The source does not seem to contain the plot generations, so the materials fields will be marked as partial. A README is present but no license. It is likewise not reproducible since the library versions are not specified and the random elements are not deterministic (seeded). The library versions could be argued against, however, since the mention of a Python version limits the libraries themselves to a minimum version value.

https://doi.org/10.1145/3448139.3448181

Paper is open access. The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. `Open Materials` include ELAN, ez R library, and psych R library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448180

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448179

Paper is open access and licensed under CC-BY-4.0. The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` include Jamovi, courseraresearchexports Python library, and the data processing and widget source code by the author. The graphs seem to be generated from jamovi, so the `Open Materials` field will be marked as full. No documentation for the materials were present. A README was

provided for both sources, but there were no licenses. The paper was also not reproducible due to lacking library versions and unclear setup instructions.

https://doi.org/10.1145/3448139.3448178

Paper is public access. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448177

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448176

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.`Open Materials` includes ENA. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448175

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Section 3.1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448174

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table S2 in a supplemental document, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448173

Paper is open access. The datasets and source can be found in a Github repository or in their relative public locations (ASSISTments and KDD). In addition, the large visualization can be found and configured on a separate website. While the public datasets have documentation, the paper created datasets do not. As such, `Open Data` will be yes while `Data Documentation` is partial. `Open Materials` will also be full while `Materials Documentation` will be partial as not everything is documented. There is a README and permissible license on the materials. The work itself is not reproducible. There are no library versions provided, and the startup script is written for Bash terminals, limiting the execution to Linux based systems (Macs as well with

some additional configuration). If given a larger time limit, the source could likely be made reproducible assuming no hidden layers of randomness.

https://doi.org/10.1145/3448139.3448172

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448171

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through the Appendices in a supplemental document, and as such it will be marked as partial. `Open Materials` include Moodle and Hypothes.is. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448170

Paper is open access and licensed under CC-BY-4.0. The datasets are both publicly available: HLD (Documentation) and SLAM (Documentation). Both dataset fields will be marked as yes. `Open Materials` include TensorFlow Python library and fastText. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448169

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448168

Paper is open access. The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. `Open Materials` include imblearn Python library, scikit-learn Python library, and transformers Python library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448167

Paper is open access and licensed under CC-BY-4.0. The datasets used are made publicly available in a Google Drive. There is no associated documentation, however. The `Open Materials` used are likewise present on a Github repository. Only some documentation is provided on the materials, so while `Open Materials` will be marked as full, the documentation will be marked as partial. There is a README and permissible license. This is not reproducible

as not all of the libraries are provided in the requirements.txt file, the nonspecific versions of libraries present cause some amount of dependency breaking depending on which versions are currently installed on the reviewer's machine. This is likely reproducible with a larger time limit.

https://doi.org/10.1145/3448139.3448166

Paper is public access. The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 2, and as such it will be marked as partial. `Open Materials` include Crystal Island, though on request. The full analysis is not provided, so `Open Materials` will be marked as on request while `Materials Documentation` will be marked as partial.

https://doi.org/10.1145/3448139.3448165

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Tables 1-2 and Section 4, and as such it will be marked as partial. The materials fields will be marked as non-applicable as it seems none was used in the data collection process, nor was any analysis performed. The reproducible field will also be marked as non-applicable for this reason.

https://doi.org/10.1145/3448139.3448164

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448163

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Tables 1-2, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448162

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not. Some data documentation is represented through Table 2, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448161

The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial. `Open Materials` include Moodle. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448160

Paper is public access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448159

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448158

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. Disco could not be determined whether it is an open materials tool.

https://doi.org/10.1145/3448139.3448156

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 2, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448155

Paper is open access and licensed under CC-BY-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. Links to the source lead to empty organizations or the base website.

https://doi.org/10.1145/3448139.3448154

The raw materials do not seem to be provided anywhere. The dataset is provided in a Google Drive, marking `Open Data` as yes. The data documentation is nonexistent.

https://doi.org/10.1145/3448139.3448153

Paper is public access. The raw materials do not seem to be provided anywhere. The dataset is provided along with its documentation. Both data fields will be marked as yes.

https://doi.org/10.1145/3448139.3448152

The raw dataset and materials do not seem to be provided anywhere. Some data documentation is represented through Table 1, and as such it will be marked as partial.

https://doi.org/10.1145/3448139.3448151

Paper is open access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448150

Paper is public access. The raw dataset does not seem to be provided anywhere. Some data documentation is represented through Table 1 and Section 1.2.2, and as such it will be marked as partial. An open version of the course can be found on a demo canvas. However, the external link no longer exists (degraded). So, `Open Materials` will still be marked as partial due to the site but degraded.

https://doi.org/10.1145/3448139.3448149

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448148

The raw dataset is supposedly provided in Continuous Evaluation of Video Lectures from Real-Time Difficulty Self-Report, but it could not be located. The data documentation is nonexistent. `Open Materials` includes Praat. Anvil was also mentioned, but the site was marked as unsafe to access, so it couldn't be confirmed to be open materials. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448147

The raw dataset was supposedly provided by Automated Analysis of Cognitive Presence in Online Discussions Written in Portuguese and Automated Content Analysis of Online Discussion Transcripts, but it could not be located. The raw dataset does not seem to be provided anywhere. `Open Materials` includes googletrans Python library. The full analysis is not provided, so the materials fields will be marked as partial.

https://doi.org/10.1145/3448139.3448146

Paper is open access and licensed under CC-BY-SA-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448145

Paper is open access and licensed under CC-BY-SA-4.0. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448144

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent.

https://doi.org/10.1145/3448139.3448143

This paper is a reflection and lessons learned from the development of the `Open Materials` RiPPLE platform. As such, all fields will be marked as non-applicable.

https://doi.org/10.1145/3448139.3448142

Paper is public access. The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. Paper claims Nota Bene is an open material, but as it is a paid software, it cannot be determined.

https://doi.org/10.1145/3448139.3448141

The raw dataset does not seem to be provided anywhere. The data documentation is likewise nonexistent. `Open Materials` include TimeMe.js JavaScript module. The full analysis is not provided, so the materials fields will be marked as partial. A preregistration was done for the paper, but the associated project is private.

https://doi.org/10.1145/3448139.3448140

The raw dataset and materials do not seem to be provided anywhere. The data documentation is likewise nonexistent. A GitHub repository was provided with the figures.
